

# Your Providenciales Forecast - Wednesday, March 10, 2010

Exclusively For:

Prepared By:

A ridge of high pressure encompasses much of the W'rn Atlantic, including the Turks/Caicos region. This ridge will remain in place through the morning of the 12th before a complex gale builds toward the Delmarva vicinity. An associated frontal boundary will build into the Turks/Caicos vicinity by the beginning of next week and force the noted high pressure ridge out of the area.

Sunrise: **06:07 AM**  
Sunset: **06:00 PM**

High Tide: **03:32 PM**  
Low Tide: **10:14 AM**

## Today

**79F**
